

Golden Coffee: Assignment 1

Author: Mukhitden Nurdaulet. Project: Golden Coffee, Astana.

Task A: Anatomy of a real page

Website: Coffee Boom - <https://coffeeboom.kz/en/>.

- Doctype: `<!DOCTYPE html>`; language: `lang="en"`.
- Encoding: `meta http-equiv="Content-Type" content="text/html; charset=utf-8"`.
- Viewport: `width=device-width, initial-scale=1.0`.
- Title: Coffee Boom - a coffee company in Kazakstan, Russia and Uzbekistan.
- Three additional meta tags: `http-equiv="x-ua-compatible" content="IE=edge"`;
`name="Keywords" content=""`; `name="theme-color" content="whitesmoke"`.

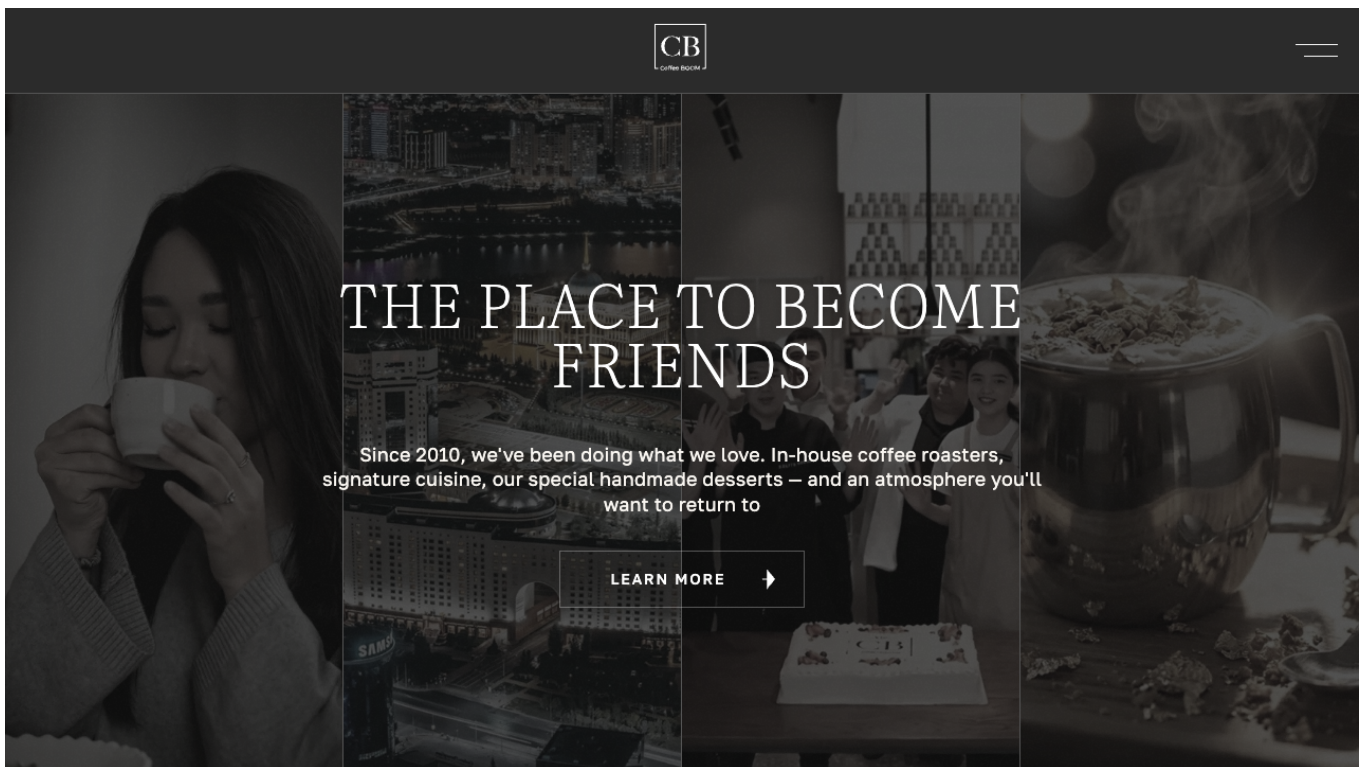

The source includes header, main and footer, one h1 and two h2 elements. It has no nav, section, article or aside elements. Many blocks use div. There are no forms or tables; the cafe search is a separate input of type search. A page does not need a table unless it has tabular data.

Three structural issues and my choices

1. The menu uses `div.h__menu`, without nav or role=navigation. In my four files, I placed the page links inside nav with an accessible label.
2. The heading "Formats" is a `div.l-text` (source line 335). In `menu.html`, I used h2 for sections and h3 inside article for breakfast descriptions.
3. The cafe search only has a placeholder, with no id, label or aria-label (source line 2060). In `visit.html`, every label has a for attribute that matches the field's id.

Task A: Website screenshot

The Coffee Boom home page, captured on 13 September 2026.

The English Coffee Boom home page

Task B: Written explanation

My web pages are HTML documents containing text and links. In menu.html, I added breakfast descriptions, a price table and ingredient notes. The browser reads the file as UTF-8 and turns the tags into a document tree. It then calculates where elements belong and draws the page. I used no custom styles, so headings and fields have the browser's default appearance.

In index.html, main separates the page content from the repeated contact details. In menu.html, each article contains one breakfast description that can be read on its own. In visit.html, nav groups the links to the four pages. A div would not explain the purpose of these sections. I used a div for the form buttons because they are a small group without a separate topic.

When Submit is pressed, the browser checks the required fields, email format and minimum number of guests. Invalid fields stop the submission. With valid values, GET adds the form data to the address and opens visit.html at the booking anchor. No server handles bookings yet. Reset restores the original field values.

Home page

The index.html page introduces the cafe and links to the other pages.

Golden Coffee

Coffee shop · Astana

Coffee and breakfast on Uly Dala

Golden Coffee is a coffee shop at 65/2 Uly Dala Avenue in Astana. I collected the address, opening hours, phone number and a few breakfast dishes on this website. The contact details belong to this branch.

The [menu page](#) lists three breakfasts: baguette with salmon, eggs with avocado, and oatmeal with dried fruit. Their descriptions make it easier to compare ingredients. Check availability and prices with the cafe before ordering.

Before your visit

The visit page has a map link and the cafe's phone number. You can check the location and plan your route. Call ahead if you need to ask about *breakfast ingredients* or holiday opening hours.

You can also share the address by email. The link opens a new message, and you choose who to send it to.

Contact the cafe by phone, WhatsApp or [Instagram](#). The visit form lets you enter a date, number of guests, contact details and any preferences for your visit.

Breakfast with your coffee

[Breakfast options](#) · [Compare ingredients](#)

I chose three dishes from an earlier Golden Coffee menu. **Check current availability and prices with the cafe.** Compare the *ingredients* and ask about any products you need to avoid.

Three breakfast options

Golden Breakfast

French baguette is served with eggs and salmon. The ingredient list also mentions “salad mix”, meaning salad greens.

Chef's Breakfast

Eggs and salmon come with avocado, herbs, salad, toast and kurt. This breakfast has different bread and more extras than Golden Breakfast.

Paradise Porridge

Oatmeal with milk, dates, raisins and pistachios is the sweet breakfast option.

Compare ingredients

Ingredients and reference prices in KZT ¹			
Dish	Base	Extras	Price
Golden	Baguette, eggs	Salmon, salad	2 400
Chef's	Toast, eggs	Salmon, avocado, herbs, salad, kurt	2 800
Paradise Porridge	Oats, milk	Dates, raisins, pistachios	1 800

¹Delivery prices come from an older Wolt menu and may have changed. Ask about ingredients if you have allergies.

Menu terms

Kurt

A dried fermented dairy product.

Salad mix

A mixture of salad greens.

Baguette

A long French bread loaf.

Visit Golden Coffee

Find the cafe

In Astana, Golden Coffee is at **65/2 Uly Dala Aye**,

Open daily: 08:00–23:00. The address and hours are listed on [Golden Coffee's 2GIS page](#). Check holiday opening hours by phone.

1. Find the location on the map.
2. Choose how to contact the cafe:
 - [Call the cafe](#).
 - [Send a WhatsApp message](#).
3. Confirm the time and number of guests.

[Share the address by email](#).

Tell the staff when you plan to come and how many people will join you. Agree on a time with your friends so everyone can plan their journey.

Plan your visit

Enter the date, number of guests and your contact details. Choose a reason for your visit and a contact method. Add the time or other preferences in the notes field.

Visit form

About this site

The colophon.html page explains my choice of elements and how the form works.

[Golden Coffee](#)

- [Home](#)
- [Menu](#)
- [Visit](#)
- [About this site](#)

How I built this site

Four local pages

I chose Golden Coffee for my project and built the site with HTML. This page is called a *colophon*: it explains how I made the site. The project includes a home page, a menu, a visit page and this explanation.

The HTML files are in the same folder. I used their filenames in the links, so the pages open directly from my computer without a server. I did not add CSS or JavaScript. The browser uses its default appearance for headings and form fields.

Why I used these elements

Each breakfast is inside an `article` because its description makes sense on its own. I used `main` for the page content and `nav` for the links. These tags make the page structure easier to understand. The address and phone number appear in every footer.

```
<nav aria-label="Pages">
  <ul>
    <li>
      <a href="menu.html">
        Menu
      </a>
    </li>
  </ul>
</nav>
```

Opening the files and using the form

I open a file with `Ctrl + O` on Windows or `Cmd + O` on a Mac. The home tab shows Golden Coffee – Coffee shop in Astana. I marked the required form fields and used the email input type. Submitting opens the local file with values in its address. There is no booking handler yet.
